

CRESTA zones

boundary and market data

Get insights from natural catastrophes with GfK boundary data

**Communicate
risk insights
using a common
standard**

USE CASES

Boundary data for analyzing, aggregating and exchanging risk-related insights.

TARGET GROUPS

insurers, reinsurers, modelers, regulators and other industry professionals.

GfK AS OFFICIAL PARTNER

Created in collaboration with PERILS CRESTA AG.

GLOBAL COVERAGE

Link your data to zones in 137 countries. Look up zones for your markets using: map viewer.

“HighRes” or “LowRes” CRESTA zones?

Two resolutions support a broad range of insurance applications:

- analyze exposures
- model catastrophes
- underwrite policies
- adjust premiums
- track loss volumes
Solvency II regulations

HighRes

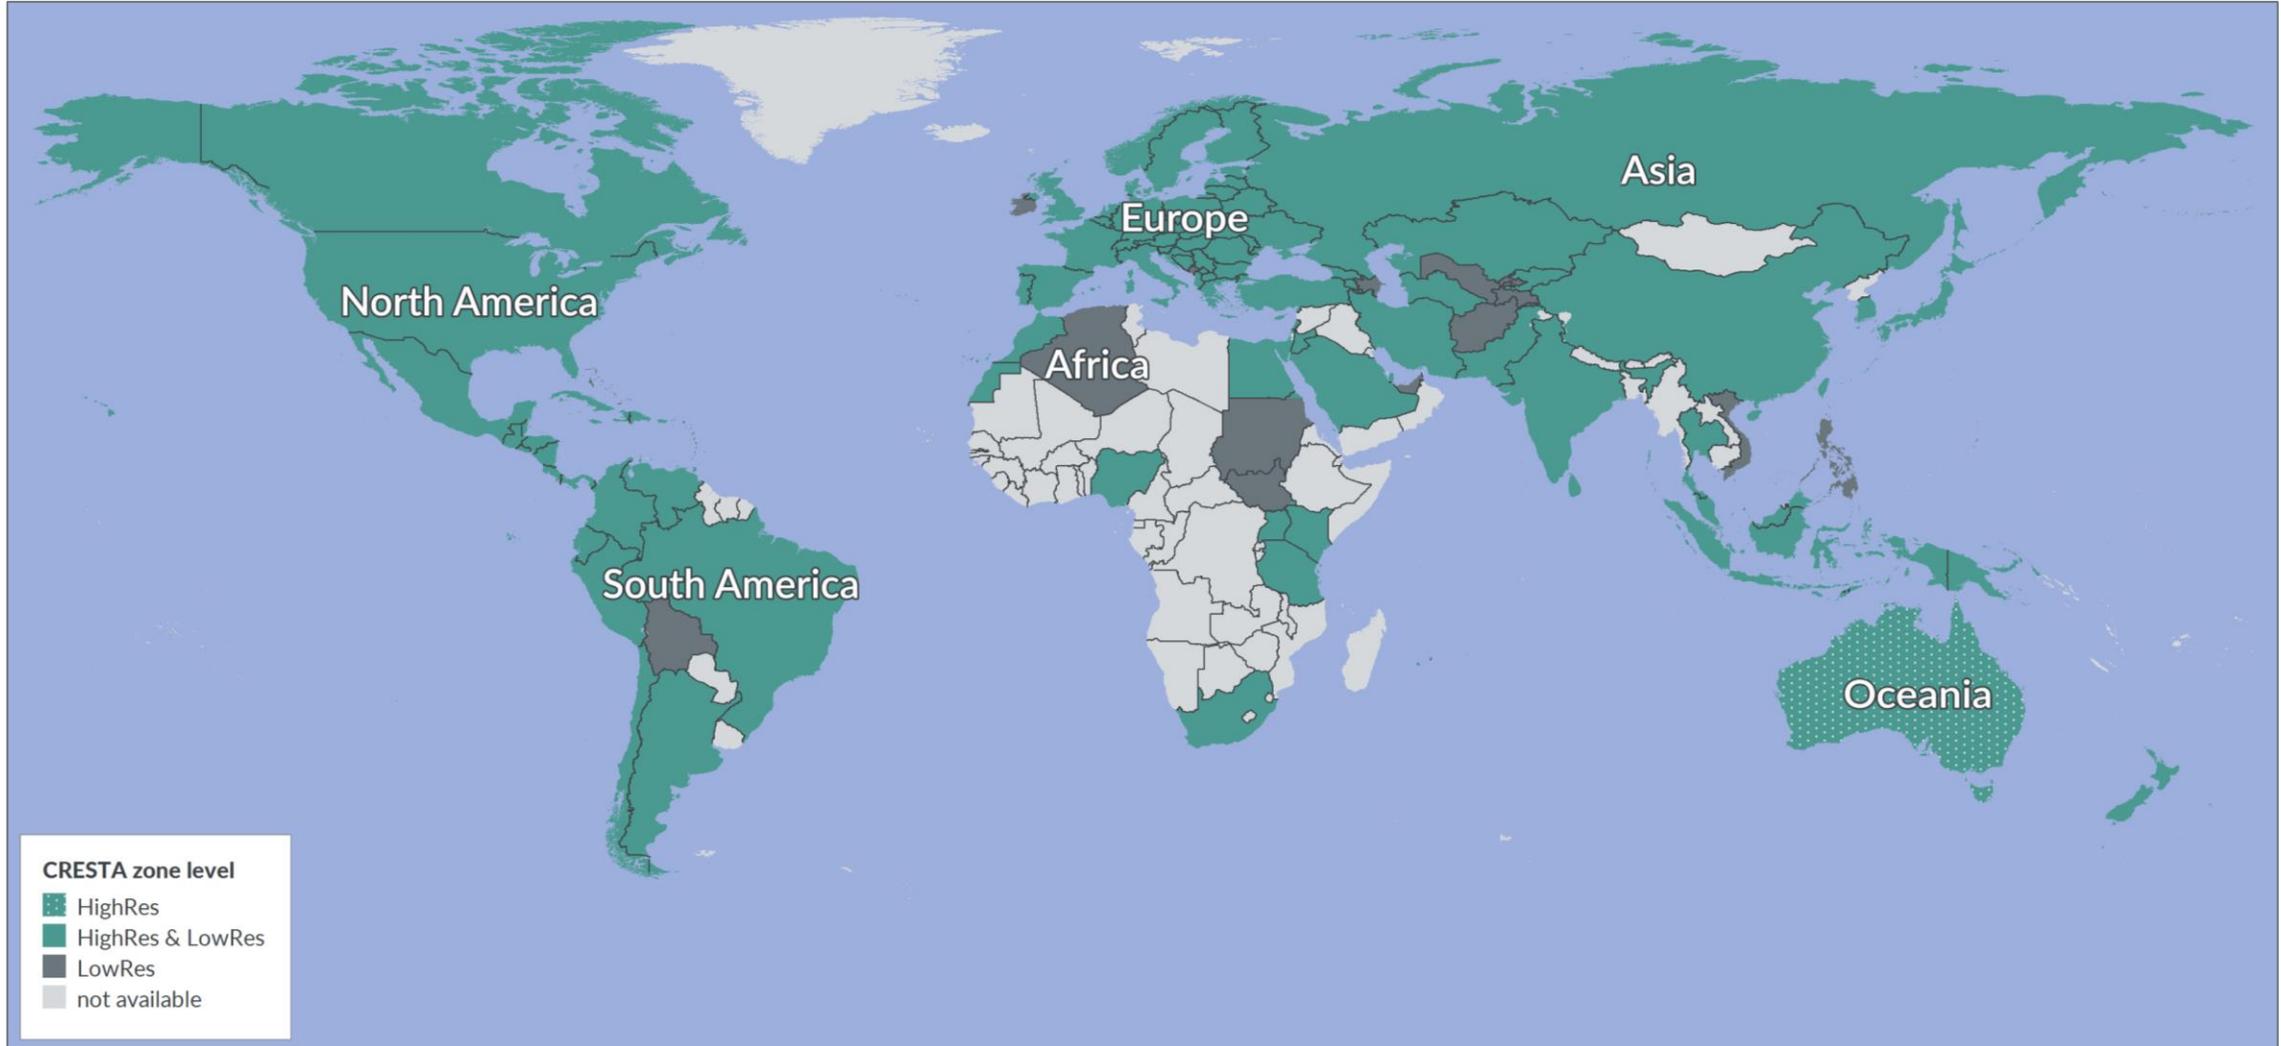

Resolution corresponds to detailed postcodes or municipalities > **242,172 units worldwide**

LowRes

Resolution corresponds to two-digit postcodes or admin. levels > **4,801 units**

CRESTA zones for all key insurance markets

Select from two resolutions depending on your needs

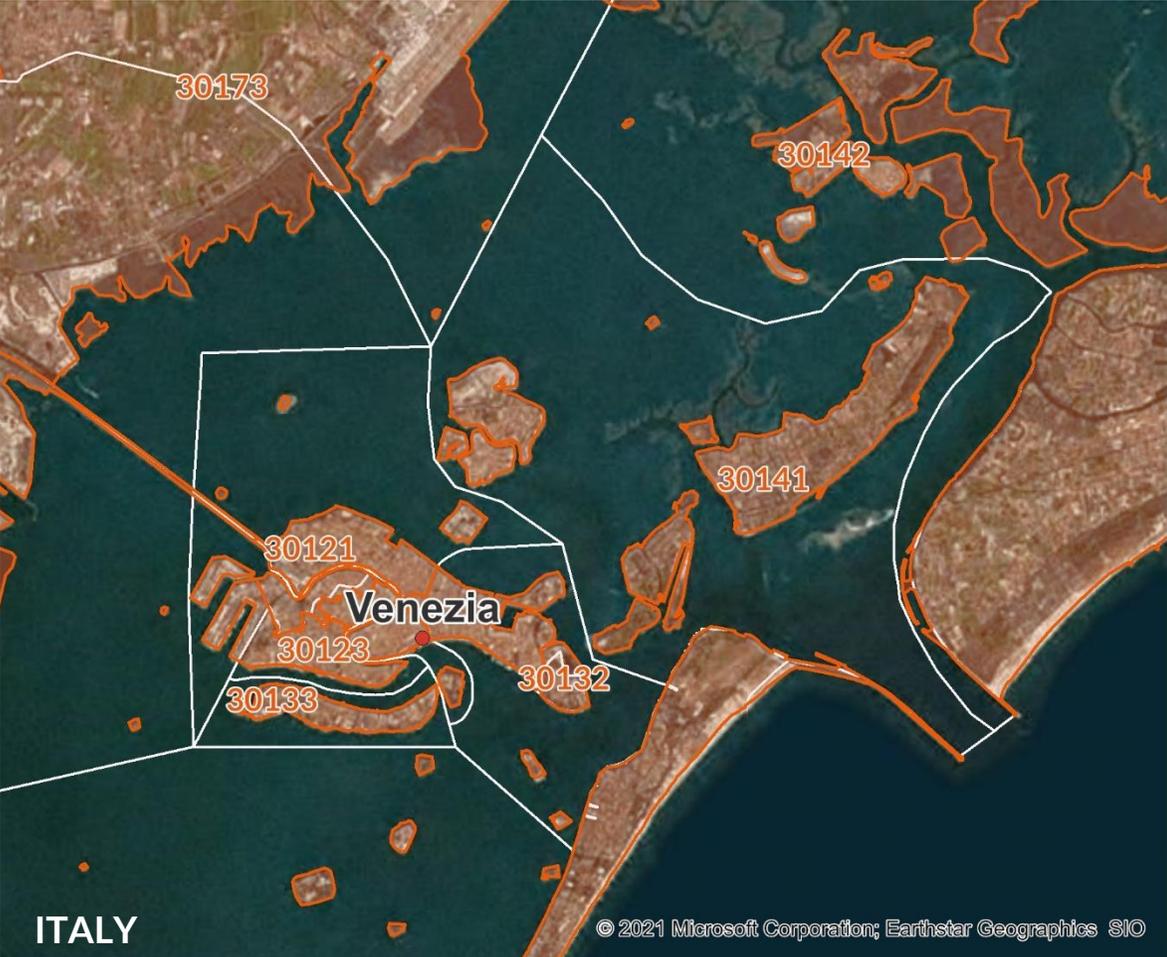

“As a globally adopted standard for the exchange of insurance data, CRESTA zones play a critical role in both assessing risk and communicating insights. GfK’s proven cartographic expertise and high-quality geodata ensure that this important product meets the evolving demands of the insurance industry.”

Dr. Luzi Hitz, CEO of PERILS

Benefit from precise boundaries in coastal, asset-heavy regions

Frequent map updates

Change of coastline due to volcanic eruption on the canary island La Palma

Analyze with greater flexibility by incorporating additional regional levels, such as GfK postcode boundaries. Incorporate market data, such as information on demographics and disposable income.

Available data for insurance applications

- **Demographic data**
Use population data to enhance your risk and loss estimates in all your markets.
- **Purchasing power data for selected countries**
Use data on disposable income for more insights when assessing probable loss volumes, setting premiums, and identifying regions for new business.

Available boundary data

We offer the largest collection of digital postcode and administrative maps on the market.

Objective and reliable basis of planning for insurance applications

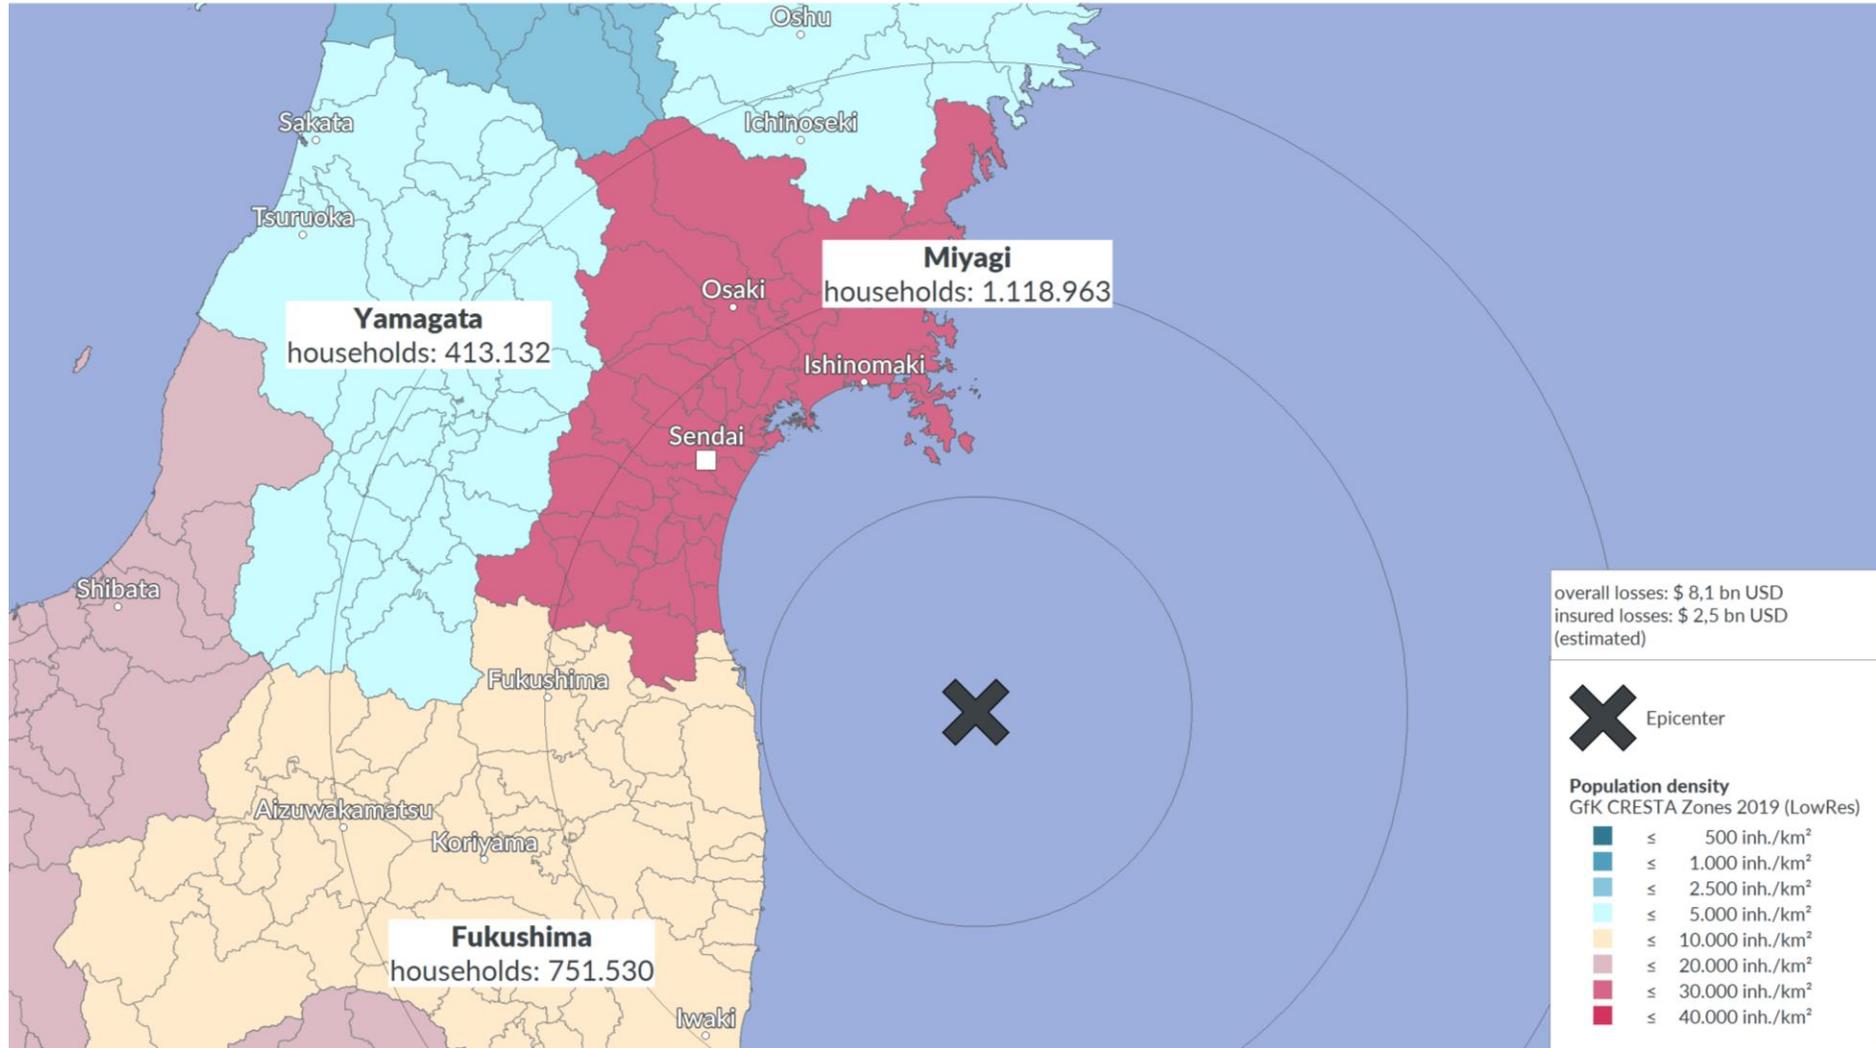

Maps and data that fit together seamlessly, without gaps or overlaps

Easy to incorporate into your GIS or risk management software

Aggregate loss types & volumes in heavily populated areas -

Fukushima earthquake 2022

Benefits

- 1 Flexible aggregations options
- 2 Coverage
- 3 Up-to-date
- 4 High-quality standard
- 5 Compatible with other GfK Geodata
